How to read this report

Potholes were found automatically in phone video by an AI model and placed using the phone's GPS. Positions can be off by 5 to 15 metres. Severity comes from the pothole's apparent width on a flat road; the camera cannot see depth, so a 'small' pothole can still be deep. Please verify on site before work is ordered. A pothole seen on several trips is more certain than one seen once.

Map tiles could not be loaded when this report was made, so the map has no streets.
